The airway, which includes the nose, mouth, pharynx, larynx, trachea, bronchi, and bronchioles, carries air between the lungs and the body 's exterior. The lungsContinue Scrolling To Read More Below...

Respiratory System | Interactive Anatomy Guide
Respiratory System Anatomy – Major Zones & Divisions. The respiratory is separated into the conducting zone and the respiratory zone. The conducting zone include structures that facilitate air to move in and out of the lungs. The respiratory zone allow inhaled oxygen to diffuse into the lung capillaries in exchange for carbon dioxide.

Respiratory System • Anatomy, Parts & Functions
Physiology of the Respiratory System. The major function of the respiratory system is to supply the body with oxygen and to dispose of carbon dioxide. To do this, at least four distinct events, collectively called respiration, must occur. Respiration

Respiratory System Anatomy and Physiology - Nurseslabs
The respiratory system supplies the blood with oxygen to be delivered to all parts of the body. The system does this through breathing. The air we breathe in (inhalation) is rich in oxygen, which is used by body tissues to maintain life functions. We exhale the carbon dioxide that these tissues produce as a waste product.

Respiratory system – interactive simulations – eduMedia
Anatomy and Physiology of Respiratory System | Main Parts. The respiratory system parts consist of. Nose; Pharynx; Larynx; Trachea, Two bronchi; Bronchioles; Two lungs (inside them alveoli), Diaphragm and inter-coastal muscles. Nose. This is the starting point of the pulmonary system and is exposed to the external environment.
